

Spotlight on Dr. Georgios K. Ntinas and His Mission in Sustainable Agriculture

Description

Dr. Georgios K. Ntinas, a key researcher at **ELGO-DIMITRA**, is making waves in the field of sustainable agriculture. With a background in water resource management and agricultural engineering, Dr. Ntinas has dedicated his work to addressing critical issues like water scarcity and climate change. His research focuses on developing innovative solutions for water conservation in agriculture, with an emphasis on practical, scalable applications for water-limited regions ??.

As a prominent figure in the **PRIMA-SAFE** project, Dr. Ntinas contributes his expertise to creating sustainable water reuse practices that improve agricultural safety and productivity. His work is pivotal for regions across the Mediterranean, where climate change and limited water resources present growing challenges for agriculture. At ELGO-DIMITRA, Dr. Ntinas collaborates closely with Dr. Afroditi Tsampalla, leading Greece's efforts within a consortium of Mediterranean partners dedicated to transforming agriculture through sustainable practices.

This international collaboration, supported by the General Secretariat for Research and Innovation under the PRIMA Programme, brings together researchers from different backgrounds to address water scarcity with innovative, science-driven solutions. Dr. Ntinias's work exemplifies how focused research and teamwork can pave the way for a sustainable agricultural future.
